Subject: Alignment of Delphi Connection Systems Component Colors with USCAR Color Guidelines

The intent of this memo is to inform you that over the next eighteen months Delphi Connection Systems will be undertaking a color rationalization activity aimed at bringing our color palette into alignment with the published USCAR Connector Color Guideline. Delphi Connection Systems is not changing the color of any component as part of this rationalization; parts that are currently blue will continue to be blue, gray parts will still be gray. However, the shades of these colors will be slightly modified as part of this rationalization activity.

This rationalization will involve a wide array of connector bodies, secondary connector parts, clips and other harness components.

This rationalization activity does not affect the composition of the material, does not impact the performance of any of the parts that Delphi manufactures and does not constitute an engineering change to the parts affected.

Thank you for your cooperation and support in this effort.

Sincerely,

Mark J. Heacox
Director of Engineering
Delphi Connection Systems North America
